STROBE Statement

Checklist of items that should be included in reports of observational studies

Section/Topic	Item No	Recommendation	Where reported
Title and abstract	1	(a) Indicate the study's design with a commonly used term in the title or the abstract	✓
	1	(b) Provide in the abstract an informative and balanced summary of what was done and what was found	
Introduction			
Background/rationale	2	Explain the scientific background and rationale for the investigation being reported	✓ Page 1
Objectives	3	State specific objectives, including any prespecified hypotheses	✓ Page 1
Methods			
Study design	4	Present key elements of study design early in the paper	✓ Page 1
Setting	5	Describe the setting, locations, and relevant dates, including periods of recruitment, exposure, follow-up, and data collection	✓ Page 1 and appendix
Participants	6	(a) Cohort study—Give the eligibility criteria, and the sources and methods of selection of participants. Describe methods of follow-up Case-control study—Give the eligibility criteria, and the sources and methods of case ascertainment and control selection. Give the rationale for the choice of cases and controls	✓ Page 1 and appendix
		Cross-sectional study—Give the eligibility criteria, and the sources and methods of selection of participants (b) Cohort study—For matched studies, give matching criteria and number of exposed and unexposed Case-control study—For matched studies, give matching criteria and the number of controls per case	-
Variables	7	Clearly define all outcomes, exposures, predictors, potential confounders, and effect modifiers. Give diagnostic criteria, if applicable	✓ Appendix
Data sources/measurement	8*	For each variable of interest, give sources of data and details of methods of assessment (measurement). Describe comparability of assessment methods if there is more than one group	✓ Appendix
Bias	9	Describe any efforts to address potential sources of bias	✓ Page 4 and appendix
Study size	10	Explain how the study size was arrived at	Figure S1
Quantitative variables	11	Explain how quantitative variables were handled in the analyses. If applicable, describe which groupings were chosen and why	
	12	(a) Describe all statistical methods, including those used to control for confounding	✓ Appendix
Statistical methods		(b) Describe any methods used to examine subgroups and interactions	✓ Appendix
		(c) Explain how missing data were addressed	✓ Appendix
		(d) Cohort study—If applicable, explain how loss to follow-up was addressed Case-control study—If applicable, explain how matching of cases and controls was addressed Cross-sectional study—If applicable, describe analytical methods taking account of sampling strategy	✓ Page 1 and appendix

(e) Describe any sensitivity analyses	Not applicable
---------------------------------------	----------------

Section/Topic	Item No	Recommendation	Reported on Page No
Results			
Participants		(a) Report numbers of individuals at each stage of study—eg numbers potentially eligible, examined for eligibility, confirmed	Page 1 and
		eligible, included in the study, completing follow-up, and analysed	Figure S1
	13*	(b) Give reasons for non-participation at each stage	Appendix,
			Figure S1
		(c) Consider use of a flow diagram	Figure S1
Descriptive data	1 4 4	(a) Give characteristics of study participants (eg demographic, clinical, social) and information on exposures and potential confounders	Table S3
	14*	(b) Indicate number of participants with missing data for each variable of interest	✓
		(c) Cohort study—Summarise follow-up time (eg, average and total amount)	✓
		Cohort study—Report numbers of outcome events or summary measures over time	✓
Outcome data	15*	Case-control study—Report numbers in each exposure category, or summary measures of exposure	-
		Cross-sectional study—Report numbers of outcome events or summary measures	=
		(a) Give unadjusted estimates and, if applicable, confounder-adjusted estimates and their precision (eg, 95% confidence interval).	✓
Main results	16	Make clear which confounders were adjusted for and why they were included	
Main results	10	(b) Report category boundaries when continuous variables were categorized	✓
		(c) If relevant, consider translating estimates of relative risk into absolute risk for a meaningful time period	
Other analyses	17	Report other analyses done—eg analyses of subgroups and interactions, and sensitivity analyses	✓
Discussion			
Key results	18	Summarise key results with reference to study objectives	Pages 3 to 4
Limitations	19	Discuss limitations of the study, taking into account sources of potential bias or imprecision. Discuss both direction and magnitude	Page 4,
	19	of any potential bias	appendix
Interpretation	20	Give a cautious overall interpretation of results considering objectives, limitations, multiplicity of analyses, results from similar	1
	20	studies, and other relevant evidence	<u> </u>
Generalisability	21	Discuss the generalisability (external validity) of the study results	✓
Other Information			
Funding	22	Give the source of funding and the role of the funders for the present study and, if applicable, for the original study on which the present article is based	√

^{*}Give information separately for cases and controls in case-control studies and, if applicable, for exposed and unexposed groups in cohort and cross-sectional studies.
